Abusing Science The Case Against  
Creationism: Philip ...

Creationists hope to persuade the public that education in science should be torn apart to make room for a literal reading of Genesis. Abusing Science refutes the popular complaint that the scientific establishment is dogmatic and intolerant, denying "academic freedom" to the unorthodox. It examines Creationist claims seriously and systematically, one by one, showing clearly just why they are at best misguided, at worst ludicrous.

evolutionary theory for non-scientists and closes with a rebuttal of the charge that this theory undermines religious and moral values. It will astonish many readers that this case must still be made in the 1980s, but since it must, Philip Kitcher makes it irresistibly and forcefully. Not long ago, a federal court struck down an Arkansas law requiring that "scientific" Creationism be taught in high school science classes.

Contemporary Creationists may have lost one legal battle, but their cause continues to thrive. Their efforts are directed not only at state legislatures but at local school boards and textbook publishers. As Kitcher argues in this rigorous but highly readable book, the integrity of science is under attack. The methods of inquiry used in evolutionary biology are those which are used throughout the sciences.

Moreover, modern biology is intertwined with other fields of science—physics,

Charles Darwin has been at the center of white-hot public debate for more than a century. In *Living With Darwin*, Philip Kitcher stokes the flames swirling around Darwin's theory, sifting through the scientific evidence for evolution, Creation Science, and Intelligent Design, and revealing why evolution has been the object of such vehement attack. first provides valuable perspective on the present controversy, describing the many puzzles that blocked evolution's acceptance in the early years, and explaining how scientific research eventually found the answers to these conundrums. Interestingly, Kitcher shows that many of these early questions have been resurrected in recent years by proponents of Intelligent Design. In fact, Darwin himself considered the issue of intelligent design, and amassed a mountain of evidence that effectively refuted the idea. Kitcher argues that the problem with Intelligent Design isn't that it's "not science," as many critics say, but that it's "dead science," raising questions long resolved by scientists. But Kitcher points out that it is also important to recognize the cost of Darwin's success--the price of "life with Darwin." Darwinism has a profound effect on our understanding of

our place in the universe, on our religious beliefs and aspirations. It is in truth the focal point of a larger clash between religious faith and modern science. Unless we can resolve this larger issue, the war over evolution will go on.

In 1996 physicist Alan Sokal published an essay in *Social Text*--an influential academic journal of cultural studies--touting the deep similarities between quantum gravitational theory and postmodern philosophy. Soon thereafter, the essay was revealed as a brilliant parody, a catalog of nonsense written in the cutting-edge but impenetrable lingo of postmodern theorists. The event sparked a furious debate in academic circles and made the headlines of newspapers in the U.S. and abroad. Now in *Fashionable Nonsense: Postmodern Intellectuals' Abuse of Science*, Sokal and his fellow

In a delightfully witty and clear voice, the two thoughtfully and thoroughly dismantle the pseudo-scientific writings of some of the most fashionable French and American intellectuals. More generally, they challenge the widespread notion that scientific theories are mere "narrations" or social constructions.

Few musical works loom as large in Western culture as Richard Wagner's four-part Ring of the Nibelung. In Finding an Ending, two eminent philosophers, Philip Kitcher and Richard Schacht, offer an illuminating look at this greatest of Wagner's achievements, focusing on its far-

reaching and subtle exploration of problems of meanings and endings in this life and world. Kitcher and Schacht plunge the reader into the heart of Wagner's Ring, drawing out the philosophical and human significance of the text and the music.

They show how different forms of love, freedom, heroism, authority, and judgment are explored and tested as it unfolds. As they journey across its sweeping musical-dramatic landscape, Kitcher and Schacht lead us to the central concern of the Ring--the problem of endowing life with genuine significance that can be enhanced rather than negated by its ending, if the right sort of ending can be found. The drama originates in Wotan's quest for a transformation of the primordial state of things into a world in which life can be lived more meaningfully. The authors trace the evolution of Wotan's efforts, the intricate problems he confronts, and his

failures and defeats. But while the problem Wotan poses for himself proves to be insoluble as he conceives of it, they suggest that his very efforts and failures set the stage for the transformation of his problem, and for the only sort of resolution of it that may be humanly possible--to which it is not Siegfried but rather Brünnhilde who shows the way. The Ring's ending, with its passing of the gods above and destruction of the world below, might seem to be devastating; but Kitcher and Schacht see a kind of meaning in and through the ending revealed to us that is profoundly affirmative, and that has perhaps never been so powerfully and so beautifully expressed.

## Abusing Science The Case Against Creationism Paperback

Politicians and lobbyists who promote new regulations and taxes often claim that the case for increased government Intervention is supported by scientific evidence. Indeed, 'evidence-based policy' has been central to the growth of the regulatory state. This monograph exposes the deficiencies of this approach. Four policy areas are examined: minimum alcohol pricing, passive smoking, global warming and happiness. In each case, the use of scientific evidence is shown to be deeply flawed. The policy-making process is characterised by basic methodological errors, as well as self-interested behaviour by the experts involved. Academic and political elites also use such policies to impose their own values on society as a whole, demonstrating contempt for the preferences of the general public. The
