The leading book in appraisal for counselors, this book is designed to help current and future workers in the helping professions become better consumers of psychological and educational tests and assessment procedures. Provides guidance on how and when to use tests in different environments with different populations. Provides practical suggestions on basic procedures such as test selection, administration, and reporting. Addresses the role of the computer in assessment including on-line testing, adaptive testing, computerized interpretation of test results, and websites as sources of information. An ideal book for assessment in counseling, psychological testing, and tests and measurement.

Now more user-friendly than ever, while continuing the legacy of excellence that Albert Hood and Richard Johnson began, the latest version of this best-selling text updates students and clinicians on the basic principles of psychological assessment, recent changes in assessment procedures, and the most widely used tests relevant to counseling practice today. Hays walks the reader through every stage of the assessment process and provides practical tools such as bolded key terminology; chapter pretests, summaries, and review questions; self-development and reflection activities; client case examples; practitioner perspectives illustrating assessment in action; and handy tip sheets. More than 100 assessment instruments examining intelligence, academic aptitude and achievement, career and life planning, personal interests and values, personality, and interpersonal relationships are described. Also discussed are specialized mental health assessments for substance abuse, depression, anxiety, anger, self-injury, eating disorders, suicide risk, and attention deficit hyperactivity disorder. \*Requests for digital versions from the ACA can be found on wiley.com. \*To request print copies, please visit the ACA website here. \*Reproduction requests for material from books published by ACA should be directed to permissions@counseling.org.

This combined textbook and reference guide identifies the three major types of psychological assessment—clinical, personality, and behavioral—and provides a survey of current theory and an expert review of the most commonly used assessment instruments (tests) in each area. The book concludes with three representative case studies that demonstrate the uses of various assessment instruments in practice. The text includes reviews of the seventeen most commonly used clinical, personality, and behavioral testing instruments, how to use them, and their application to the assessment process. Chapter 3 presents a workable framework to help students assimilate the DSM-IV-TR system. Three case studies in Chapter 7 demonstrate how various instruments are used as a battery to gather diagnostic and assessment information.

The primary purpose of this revision remains identical to that of the first edition—to show how key personality, cognitive/behavioral, and vocational tests/assessment procedures can be used by counselors in their work with clients. Too often, assessment books only provide the reader with information about tests and assessment procedures. They do not, however, take the next step—showing readers how these tests/assessment procedures can be used and integrated into the actual work of counseling. This revision is designed to fill that void. Chapter authors, all of whom are experts in their respective topic areas, share the theoretical and research backgrounds about a particular test/assessment procedure and then provide a case example or examples to show how assessment data can be meaningfully incorporated into the counseling process.

Because testing has long been regarded as an important role for counselors, they traditionally have provided a variety of testing services, including personality, vocational, intellectual, and aptitude testing. A major purpose of this book is to show how these kinds of tests can be used to augment and facilitate the counseling process. Testing in Counseling Practice provides current information about various tests and assessment methods such as historical foundations and conceptual background, measurement properties, administration and interpretation, implementation, and future research directions. The book is divided into three sections: personality assessment, vocational assessment, and contemporary issues and innovations. Each chapter is written either by the person who developed and originated the test/assessment method or by the person who is regarded as the major interpreter of it. Case examples showing how various test/assessment methods can be used in counseling practice are also included.
