By exploring the many different types and forms of contemporary musical instruments, this book contributes to a better understanding of the conditions of instrumentality in the 21st century. associated with musical instruments? · What kind of (mental and physical) knowledge do we access in order to recognize or use something as a musical instrument? · How is this knowledge being shaped by cultural conventions and temporal conditions? · How do algorithmic processes 'change the game' of musical performance, and as a result, how do they affect notions of instrumentality? · How do we address the question of instrumental identity within an instrument's design process? · What properties can be used to differentiate successful and unsuccessful instruments? Do these properties also contribute to the instrumentality of an object in general? What does success mean within an artistic, commercial, technological, or scientific context?

Countering the many claims that the best days of capitalism are over following the economic meltdown of 2008 onwards, this book provocatively argues that a new golden age of capitalism - or upwave - began around 2002, and despite the unstable markets in the western world of the past few years, this upwave will produce previously unseen levels of wealth creation during the next twenty years. Basing this theory on the commercialisation of new technologies and the growth of new markets, the author claims that these positive trends are key to economic recovery in the US, UK and Europe. It argues that the most serious problem facing some countries in the west is government debt and that macroeconomic policy is of limited use in flexible and adaptive economies, where innovation, entrepreneurship and private investment should be encouraged in a range of cities and city regions. This highly original book will interest those concerned with national economies, nation states and urban policy.
