The position is $s = v dt + C_2$, where C_2 is the constant of integration. $s = (10t^2 + 10) dt + C_2 = 10 \int t^2 dt + 10t + C_2$. At $t = 0$, $s = 40$ m, thus $C_2 = 40$. The position is $s = 10 \int t^2 dt + 10t + 40$ m. At $t = 3$ seconds, $s = 10 \int t^2 dt + 10t + 40$ $t=3 = 100$ m. The velocity at $t = 3$ seconds is $v = 10t^2 + 10$ $t=3 = 80$ m/s .

mechanics departments. Better enables students to learn challenging material through effective, efficient examples and explanations.

Designed to provide a more mature, in-depth treatment of mechanics this book focuses on developing a solid understanding of basic principles rather than rote learning of specific methodologies.

While teaching the basic principles of mechanics in an example-driven format, this innovative text takes a critical thinking

approach to help introductory students learn to think like engineers. Compelling photorealistic art, and a robust photograph program prompt students to visualize and think critically about engineering situations while Optional Design Examples and Computational Examples expose students to important ABET topics. This text is supported by the brand new OneKey course management system that enables instructors to post solutions, manage homework, and offer students test/quiz preparation and more via a free class Web site.

This work and its companion, Statics, deliver a consistent problem-solving methodology for statics and present a precise and accurate treatment of the fundamentals of dynamics. Features include: real world applications; chapter openers illustrating an application of the ideas in the chapter; and the use of
