Award-winning psychology writer Annie Paul delivers a scathing exposé on the history and effects of personality tests. Millions of people worldwide take personality tests each year to direct their education, to decide on a career, to determine if they'll be hired, to join the armed forces, and to settle legal disputes. Yet, according to award-winning psychology writer Annie Murphy Paul, the sheer number of tests administered obscures a simple fact: they don't work. Most personality tests are seriously flawed, and sometimes unequivocally wrong. They fail the field's own standards of validity and reliability. They ask intrusive questions. They produce descriptions of people that are nothing like human beings as they actually are: complicated, contradictory, changeable across time and place. The Cult Of Personality Testing documents, for the first time, the disturbing consequences of these tests. Children are being labeled in limiting ways. Businesses and the government are wasting hundreds of millions of dollars every year, only to make ill-informed decisions about hiring and firing. Job seekers are having their privacy invaded and their rights trampled, and our judicial system is being undermined by faulty evidence. Paul's eye-opening chronicle reveals the fascinating history behind a lucrative and largely unregulated business. Captivating, insightful, and sometimes shocking, The Cult Of Personality Testing offers an exhilarating trip into the human mind and heart.

Say Hello to Your Incoming Class—They're Not Millennials Anymore Generation Z is rapidly replacing Millennials on college campuses. Those born from 1995 through 2010 have different motivations, learning styles, characteristics, skill sets, and social concerns than previous generations. Unlike Millennials, Generation Z students grew up in a recession and are under no illusions about their prospects for employment after college. While skeptical about the cost and value of higher education, they are also entrepreneurial, innovative, and independent learners concerned with effecting social change. Understanding Generation Z's mindset and goals is paramount to supporting, developing, and educating them through higher education. Generation Z Goes to College showcases findings from an in-depth study of over 1,100 Generation Z college students from 15 vastly different U.S. higher education institutions as well as additional studies from youth, market, and education research related to this generation. Authors Corey Seemiller and Meghan Grace provide interpretations, implications, and recommendations for program, process, and curriculum changes that will maximize the educational impact on Generation Z students. Generation Z Goes to College is the first book on how this up-and-coming generation will change higher education.

The Gift of the Magi is a treasured short story written by O. Henry. A young and very much in love couple can barely afford their one-room apartment, let alone the extra expense of getting Christmas presents for one another. But each is determined to show their love for the other in this traditional time of giving; each sells a thing they hold most dear in order to afford a present, with poignant and touching results that capture their love for one another.

When Fay Ajzenberg-Selove became a nuclear physicist, the number of women in the field could be counted on one hand. In this engaging memoir, Fay Ajzenberg-Selove writes candidly about her difficult journey to international recognition in physics. She is frank about the ways being a woman has made a difference in her opportunities and choices as a scientist--and how, by being a woman, she has made a difference in the world of physics. Ajzenberg-Selove came to America at the age of 15 after narrowly escaping the Nazi takeover of France. She had planned to become an engineer like her father, but switched to physics after she was told the only engineering jobs open to women were in drafting: Marie Curie's example proved to her that women could do physics. Her first attempt at graduate work at Columbia University was a disaster, but she was sturck with the intellectual beauty of the field. After taking a Ph.D. in physics at University of Wisconsin, she did post-doctoral work with Thomas Lauritsen at the California Institute of Technology, where she began writing the first of a series of major review papers on the nuclear spectroscopy of the light nuclei, a subject of fundamental importance to nuclear physics, astrophysics, and applied physics. She continued this work and experimental research for thirty-eight years while teaching at Boston University, Haverford College, and the University of Pennsylvania. During her early career, Ajzenberg-Selove was shielded by her male mentors from experiencing much of the discrimination directed against women in science. Her simultaneous battles to become a tenured professor and to overcome breast cancer opened her eyes and confirmed her as a feminist. The lay reader and the scientist alike will be fascinated by Ajzenberg-Selove's clear portrayal of her interlinked lives as physicist, teacher, wife of particle physicist, Walter Selove, and a woman who relishes both competition and friendship in a male-dominated field. An invaluable book for anyone contemplating a career in science.

A new translation of Voltaire's Treatise on Toleration, one of the most important essays on religious tolerance and freedom of thought A powerful, impassioned case for the values of freedom of conscience and religious tolerance, Treatise on Toleration was written after the Toulouse merchant Jean Calas was falsely accused of murdering his son and executed on the wheel in 1762. As it became clear that Calas had been persecuted by 'an irrational mob' for being a Protestant, the Enlightenment philosopher Voltaire began a campaign to vindicate him and his family. The resulting work, a screed against fanaticism and a plea for understanding, is as fresh and urgent today as when it was written.

A poetic translation of the classic Arthurian story is an edition in alliterative language and rhyme of the epic confrontation between a young Round Table hero and a green-clad stranger who compels him to meet his destiny at the Green Chapel. Reprint. 20,000 first printing.

Describes the experiences of a newcomer to the Yukon when he attempts to hike through the snow to reach a mining claim.

The Ion is the shortest, or nearly the shortest, of all the writings which bear the name of Plato, and is not authenticated by any early external testimony. The grace and beauty of this little work supply the only, and perhaps a sufficient, proof of its genuineness. The plan is simple; the dramatic interest consists entirely in the contrast between the irony of Socrates and the transparent vanity and childlike enthusiasm of the rhapsode Ion. The theme of the Dialogue may possibly have been suggested by the passage of Xenophon's Memorabilia in which the rhapsodists are described by Euthydemus as 'very precise about the exact words of Homer, but very idiotic themselves.' (Compare Aristotle, Met.)
