traveling in some of the world's most dangerous countries; enduring cold bivouacs, searing lungs, and a cloudy mind when you can least afford one. It means learning the hard lessons the mountains teach. Steve House built his reputation on ascents throughout the Alps, Canada, Alaska, the Karakoram and the Himalaya that have expanded possibilities of style, speed, and difficulty. In 2005 Steve and alpinist Vince Anderson pioneered a direct new route on the Rupal Face of 26,600-foot Nanga Parbat, which had never before been climbed in alpine style. It was the third ascent of the face and the achievement earned Steve and Vince the first Piolet d'or (Golden Ice Axe) awarded to North Americans. Steve is an

and lower. The technical protection systems are covered, of course. But 30 years of alpine climbing experience has convinced the authors that mastery - and safety - lie in the far more difficult task of knowing exactly which techniques to use, where and when. Therefore, they teach step-by-step decision-making skills, providing scenarios, checklists, and self-posed questions to inform the decision process. Alpine Climbing assumes some prior knowledge, primarily in rock climbing skills and techniques. Basic knots, belaying, rappelling, building rock anchors, leading, placing rock protection, and movement skills on rock: variations of these skills that are of particular value in the alpine environment are addressed in this

difficult routes, Twight centers his instruction on the ethos of climbing the hardest routes with the least amount of gear and the most speed. Throughout, Twight makes it clear that the two things he refuses to compromise are safety and his climbing ethics. In addition to the extensive chapters on advanced techniques and skills, Twight also discusses mental preparedness and attitude; strength and cardiovascular training; good nutrition; and tips on equipment and clothing.

The rope is stuck, or too short. A crucial piece of gear is MIA. You've wandered off route into dicey terrain. An injury leaves you or your partner in need of help. Climb long enough and finding yourself in a jam far from help is inevitable. In *Climbing: Self Rescue*, two long-time climbing instructors and guides teach how to improvise your own solutions, calling for outside help only when necessary. Because few climbers carry fancy (and expensive) search and rescue gear, all skills taught in this book use the items typically found on a climbing rack: rope, carabiners, slings, and cord. Text,

illustrations, and photos explain knots, belaying and hauling systems, rappelling, ascension, passing knots, how to safely assist and rig an injured climber, and more. Roughly half of the book is devoted to real-life climbing scenarios and solutions ranging from moderate to severe. Because real-life situations rarely unfold as they do in practice, Climbing Self-Rescue teaches how to analyze and improvise your way out of a crisis.
