What do you do if you get stuck in an elevator in Mogadishu? How worried should you be about being followed after an interview with a ring of human traffickers in Lebanon? What happens to your research if you get placed on a government watchlist? And what if you find yourself feeling like you just aren't cut out for fieldwork? *Stories from the Field* is a relatable, thoughtful, and unorthodox guide to field research in political science. It features personal stories from working political scientists: some funny, some dramatic, all fascinating and informative. Political scientists from a diverse range of biographical and academic backgrounds describe research in North and South America, Africa, Asia, Europe, and the Middle East, ranging from archival work to interviews with

combatants. In sharing their stories, the book's forty-four contributors provide accessible illustrations of key concepts, including specific research methods like conducting surveys and interviews, practical questions of health and safety, and general principles such as the importance of flexibility, creativity, and interpersonal connections. The contributors reflect not only on their own experiences but also on larger questions about research ethics, responsibility, and the effects of their personal and professional identities on their fieldwork. *Stories from the Field* is an essential resource for graduate and advanced undergraduate students learning about field research methods, as well as established scholars contemplating new journeys into the field.

This book is an in-depth guide to effective scientific research. Ranging from the philosophical to the practical, it explains at the outset what science can and can't achieve, and discusses its relationship to mathematics and laws. The author then pays extensive attention to the scientific method, including experimental design, verification, uncertainty and statistics. A major aim of the book is to help young scientists reflect upon the deeper aims of their work and make the best use of their talents in contributing to progress. To this end, it also includes sections on planning research, on presenting one's findings in writing, as well as on ethics and the responsibilities of scientists.
