Assertive Communication: Honesty + Respect. The three toxic communication styles—passive, aggressive, and passive-aggressive—never work in the long-run. While each gives a fleeting benefit initially, they end up leading to broken relationships, poor self-esteem, and ultimately, loneliness. If you can't connect with other people in an honest and respectful way, you've never going to ...

Voilà désormais plus de 10 000 ans que la civilisation occidentale s'est installée et voilà 10 000 ans qu'elle viole le sens même de la nature : la vie. En s'appropriant sans concession ce qui l'entourait, l'homme de l'Ouest a vu son horizon ployer sous la charge de la destruction qu'il lui avait lui-même réalisée. Sommes-nous des lycanthropes ou des vampires? Ces monstres si terrifiants qui sortent de notre imagination sont-ils en réalité la copie de notre comportement dévastateur? Prédateurs, nous pompons sans remords les énergies qui nous entourent. Jusqu'où ira-t-on?.

Freedom of information is a principle commonly associated with the United States' First Amendment traditions or digital-era technology boosters. *Barriers Down* reveals its unexpected origins in political, economic, and cultural battles over analog media in the mid-twentieth century. Diana Lemberg traces how the United States shaped media around the world after 1945 under the banner of the "free flow of information," showing how the push for global media access acted as a vehicle for American power. *Barriers Down* considers debates over civil liberties and censorship in Nazi Germany, the Soviet Union, and elsewhere alongside Americans' efforts to circumvent foreign regulatory systems in the quest to expand markets and bring their ideas to new publics. Lemberg shows how in the decades following the Second World War American free-flow policies reshaped the world's information landscape, though not always as intended. Through burgeoning information diplomacy and development aid, Washington diffused new media ranging from television and satellite broadcasting to global English. But these actions also spurred overseas actors to articulate alternative understandings of information freedom and of how information flows might be regulated. Bridging the historiographies of the United States in the world, human rights, decolonization and development, and media and technology, *Barriers Down* excavates the analog roots of digital-age debates over the politics and ethics of transnational information flows.

Fortier looks at information technologies in society, uncovering a relationship that subjugates workers, manipulates consumers and extends media monopolies but also offers democratic alternatives.

Information is regarded as a distinguishing feature of our world. Where once economies were built on industry and conquest, we are now part of a global information economy. Pervasive media, expanding information occupations and the development of the internet convince many that living in an Information Society is the destiny of us all. Coping in an era of information flows, of virtual relationships and breakneck change poses challenges to one and all. In *Theories of the Information Society* Frank Webster sets out to make sense of the information explosion, taking a sceptical look at what thinkers mean when they refer to the Information Society, and critically examining the major post-war approaches to informational development. The fourth edition of this classic study brings it up to date with new research and with social and technological changes – from the ‘ Twitter Revolutions ’ of North Africa, to financial crises that introduced the worst recession in a life time, to the emergence of social media and blogging – and reassesses the work of key theorists in the light of these changes. More outspoken than in previous editions, Webster urges abandonment of Information Society scenarios, preferring analysis of the informatization of long-established relationships. This interdisciplinary book is essential reading for those trying to make sense of social and technological change in the post-war era. It addresses issues of central concern to students of sociology, politics, geography, communications, information science, cultural studies, computing and librarianship.

The impact of the information society' are multiform and transdisciplinary. There are few areas of social, political and economic life that have not been affected or challenged by the new technologies of information and communication. In this short introduction, Armand Mattelart unpacks the notion of the information society, and examines why it has become the dominant paradigm for social change in the 21st Century. Critically, he also asks why the notion has come to dominant in the absence of any critical examination of the conditions under which it has been produced. Combining a long-term historical and geopolitical perspective, Mattelart questions the axioms used to legitimate the Information Society and critically assesses the ways in which it has been conceptualised as a theoretical concept as well as policy making tool. This introduction will be of interest to all students of media and communication, as well as social scientists in general.

This concise introduction to the development of communication theory offers an historical account of the development of all theoretical approaches, including the Chicago school, constructivism, structuralism and ethnomethodology.

Moving beyond notions of cultural imperialism, this book furthers our understanding of the implications of global media culture and politics in the 1990s. Leading scholars from a range of fields bring different perspectives to bear on the role of the state, the range of culture beyond the media, the contribution of international organizations, and the potential for resistance and alternatives. They reflect on the 'New World International Communications Order' as delineated since the 1970s, and examine its changing nature. Throughout, they connect analysis of the flows and forces which form the world media and communications with the fundamental themes of social science, and illuminate the ways in which underlying questions of inequality, power and control reappear within new media environments.
